

Experiment 1: Future Method Apex

Future Methods enable time-consuming operations to run in the background after the current transaction has finished. This improves system performance and enhances the user experience by handling nonurgent tasks asynchronously. In this experiment, a Future Method is implemented to retrieve an Account record and print its details in the Debug Log for verification.

Experiment 2: Execute Future Method

Description

The Future Method is executed from the Developer Console using Execute Anonymous. The Account ID is passed as an input parameter, and Salesforce schedules the method for asynchronous execution.

Experiment 3: Debug Log Verification

Objective

To verify that the Future Method has started successfully using the Salesforce Debug Log.

Description

The Debug Log displays the message "Future Method Started", confirming that Salesforce executed the Future Method asynchronously.

Experiment 4: Processing Account

Objective

To verify that the Future Method successfully retrieved and processed the Account record.

Description

The Debug Log displays the Account name that was processed by the Future Method, confirming successful execution.

The screenshot shows the Salesforce Developer Console interface. The top navigation bar includes tabs for 'Log in', 'Hands-On Orgs', 'Test Account | Account | Sales', 'Developer Console', and 'Ask Gemini'. The address bar displays the URL: `resilient-unicorn-9fd1hw-dev-ed.trailblaze.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage`. The main area is titled 'USER_DEBUG' and shows the 'Execution Log' for the 'Log executeAnonymous @07/08/2026, 10:14:49' session. The log contains various events such as 'HEAP_ALLOCATE', 'VARIABLE_ASSI...', 'STATEMENT_EX...', 'SYSTEM_MODE...', 'CUMULATIVE_L...', 'LIMIT_USAGE...', and 'LIMIT_USAGE...'. A dialog box titled 'Log line #50 details' is open, showing the log entry: '10:28:22:050 USER_DEBUG [14] (DEBUG) Processing Account: Test Account'. Below the log, there is a table with columns: 'User', 'Application', 'Operation', 'Time', 'Status', 'Read', and 'Size'. The table contains four rows of data.

Experiment 5: Queueable Apex

Objective

To create a Queueable Apex class for structured background processing.

Description

Queueable Apex allows developers to perform asynchronous processing with better control, scalability, and flexibility. The Queueable class processes Account records and prints debug messages.

Experiment 7: Queueable Debug Messages

Objective

To verify successful execution of the Queueable Apex job using Debug Logs.

Description

The Debug Log displays:

- Queueable Job Started
- Processing Account
- Queueable Job Completed

These messages confirm successful background execution.

The screenshot shows the Salesforce Developer Console interface. The top navigation bar includes tabs for 'Log in', 'Hands-On Orgs', 'Test Account | Account | Sales', and 'Developer Console'. The browser address bar shows the URL: `resilient-unicorn-9fd1hw-dev-ed.trailblaze.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage`. The 'Developer Console' tab is active, displaying the 'Execution Log' for the 'AccountQueueableJob.apex' class. The log shows a series of events including 'VARIABLE_ASSIGNMENT', 'STATEMENT_EXECUTE', 'HEAP_ALLOCATE', 'USER_DEBUG', and 'SYSTEM_MODE_ON'. A modal window titled 'Log line #169 details' is open, showing the log line: '11:21:17:020 USER_DEBUG [16] | [DEBUG] Queueable Job Completed'. Below the log, there is a table with columns: 'User', 'Application', 'Operation', 'Time', 'Status', 'Read', and 'Size'. The table lists several log entries, including 'QueueableHandler' and 'FutureHandler'.

User	Application	Operation	Time	Status	Read	Size

DUDALA MADHAVI	Unknown	FutureHandler	07/08/2026, 10:28:22	Success		4.06 KB

Experiment 8: Batch Apex

Objective

To create a Batch Apex class that processes Account records in batches.

Description

Batch Apex is used to process a large number of records efficiently by dividing them into smaller batches. The Batch class includes the `start()`, `execute()`, and `finish()` methods.

User	Application	Operation	Time	Status	Read	Size
DUDALA MADHAVI	Unknown	Batch Apex	07/08/2026, 11:24:50	Success	Unread	3.7 KB

DUDALA MADHAVI	Unknown	SerialBatchApexRangeChunkHandler	07/08/2026, 11:24:50	Success	Unread	4.78 KB
DUDALA MADHAVI	Unknown	/services/data/v67.0/tooling/execute...	07/08/2026, 11:24:49	Success	Unread	2.98 KB
DUDALA MADHAVI	Unknown	Batch Apex	07/08/2026, 11:24:49	Success	Unread	3.83 KB
DUDALA MADHAVI	Unknown	SerialBatchApexRangeChunkHandler	07/08/2026, 11:24:49	Success	Unread	2.53 KB

Experiment 9: Batch Execution

Objective

To execute the Batch Apex class using Execute Anonymous.

Execute Anonymous Code :

```
Database.executeBatch(new AccountBatchJob(), 5);
```

```

1 public class AccountBatchJob implements Database.Batchable<SObject> {
2
3     public Database.QueryLocator start(Database.BatchableContext bc) {
4
5         return Database.getQueryLocator(
6             'SELECT Id, Name FROM Account'
7         );
8     }
9
10    public void execute(Database.BatchableContext bc, List<Account> scope) {
11
12        for(Account acc : scope){
13            System.debug('Batch Processing: ' + acc.Name);
14        }
15    }
16
17    public void finish(Database.BatchableContext bc){
18
19        System.debug('Batch Job Completed');
20    }
21 }

```

User	Application	Operation	Time	Status	Read	Size

Experiment 10: Batch Debug Messages

Objective

To verify successful execution of the Batch Apex job using Debug Logs.

Description

The Debug Log displays "Batch Job Completed", confirming successful batch execution.

Experiment 11: Scheduled Apex

Objective

To create a Scheduled Apex class that executes automatically at a specified time.

Description

Scheduled Apex automates background processing based on a defined schedule using the Schedulable interface.

resilient-unicorn-9fd1hw-dev-ed.trailblaze.my.salesforce.com/_ui/common/apex/debug/ApexCSIPage

USER_DEBUG 1/1

AccountScheduler.apxc

```
1 public class AccountScheduler implements Schedulable {
2
3     public void execute(SchedulableContext sc) {
4
5         System.debug('Scheduled Job Started');
6
7         List<Account> accounts = [
8             SELECT Id, Name
9             FROM Account
10        ];
11
12        for(Account acc : accounts){
13            System.debug('Scheduled Processing: ' + acc.Name);
14        }
15
16        System.debug('Scheduled Job Completed');
17    }
18 }
```

Experiment 13: Verify Scheduled Job

Objective

To verify that the Scheduled Apex job has been successfully created.

Description

The Scheduled Jobs page displays the scheduled job name, next execution time, and job type, confirming successful scheduling.

The screenshot shows the Salesforce Setup page for Scheduled Jobs. The left sidebar contains navigation links for Setup, Home, Object Manager, Environments, Jobs, and Scheduled Jobs. The main content area displays the 'Scheduled Jobs' page with a search bar and a table of scheduled jobs. A yellow banner indicates that 1% of the scheduled Apex jobs limit (100) has been used.

Percentage of Scheduled Jobs Used: 1%
You have currently used 1 scheduled Apex jobs out of an allowed organization limit of 100 active or scheduled jobs. To learn about how this limit is calculated and what contributes to it see the [Lightning Platform Apex Limits](#) topic.
